

# PEDESTRIAN BARRIER SYSTEM

## Product Overview

The Pedestrian Barrier System is designed to provide rapid construction of pedestrian control structures using the standard Size 4 (48.3mm o/d) galvanised steel tube and fittings. Fabricated from mild steel, the barriers are hot dipped galvanised to BS EN ISO 1461:1999. Also available polyester powder coated to any standard RAL colour.

## Advantages

- Meets the infill requirements of Sections 2.4.1 and 2.4.2 of BS7818:1995 (Pedestrian Restraint Systems in Metal).
- Standard size is 900mm wide by 1100mm high but barriers can be quickly custom made to suit individual requirements, however standard size is 900mm x 1100mm.

## Application

- Access to public and commercial buildings.
- Retaining walls.
- Pedestrian segregation.
